surgery

A kidney transplant is a possible treatment option for people on dialysis. However, not everyone who wants a transplant can be considered eligible to receive one. Only transplant center professionals can determine if a patient is a good candidate for a transplant.

Each transplant center uses its own set of standards for deciding if a patient is a good candidate for a kidney transplant. In some cases, a patient can be turned down by one transplant center, but found to be eligible at another transplant center.

The table on the following pages is a tool to help guide dialysis patients, their family members and care partners to the transplant centers that could most likely meet their needs.
Obesity is defined as a BMI ≥30 kg/m². Morbid obesity is defined as a BMI ≥40 kg/m² or a BMI ≥35 kg/m² and one or more co-morbid conditions.

Absolute Exclusion Criteria: A list of medical conditions that would prevent a person from being eligible for a transplant. (Every transplant unit has its own set of exclusions.)
Relative Exclusion Criteria: A list of medical conditions that can be treated and later reviewed by a transplant team to determine if a patient can be transplanted.

Obesity is defined as a BMI ≥30 kg/m².
Morbid obesity is defined as a BMI ≥40 kg/m² or a BMI ≥35 kg/m² and one or more co-morbid conditions.
