

HOW TO VERIFY VASCULAR ACCESS DATA IN CROWNWEB

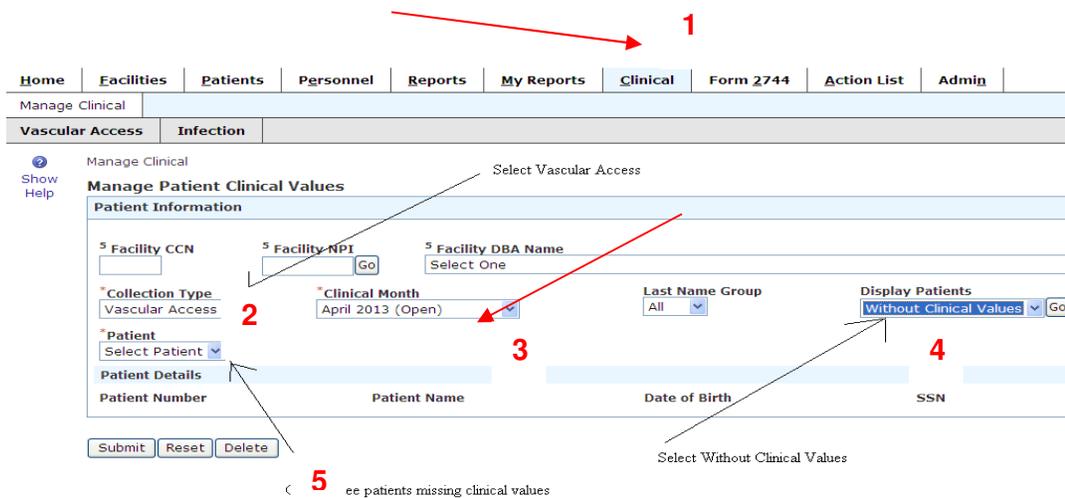

The Network will help you monitor the vascular access data in CROWNWeb. Please make sure that the vascular access data is accurate in CROWNWeb on a monthly basis. To verify if your facility is missing vascular access data for any patients, go to

1. Clinical tab in CROWNWeb and
2. Select collection type as "Vascular access", "Hemodialysis" or "Peritoneal Dialysis"
3. Select the month,
4. Select "without clinical values" under display patients. Then click "Go".
5. Click under patient to see patients with missing clinical values.

If vascular access data is missing in CROWNWeb, then

- Add missing data in CROWNWeb, if you are manually entering data,
- Contact your batch submitting organization representative, if you are submitting data via batch

Also, compare vascular access data in CROWNWeb to vascular access data in your facility computer system. You can also run "vascular access in use" report in CROWNWeb.

The screenshot shows the 'Manage Patient Clinical Values' page in CROWNWeb. The interface includes a navigation menu at the top with tabs for Home, Facilities, Patients, Personnel, Reports, My Reports, Clinical, Form 2744, Action List, and Admin. The 'Clinical' tab is selected. Below the navigation, there are sections for 'Manage Clinical', 'Vascular Access', and 'Infection'. The main form area is titled 'Manage Patient Clinical Values' and contains several input fields and dropdown menus. Red arrows and numbers 1 through 5 point to specific elements: 1 points to the 'Clinical' tab; 2 points to the 'Collection Type' dropdown menu; 3 points to the 'Clinical Month' dropdown menu; 4 points to the 'Display Patients' dropdown menu; and 5 points to the 'Submit' button. A legend at the bottom indicates that 5 represents 'See patients missing clinical values'.
