# Meeting Reminders

## Chat with Us!

- This meeting will be recorded and slides made available on the Network Website
- All phone lines have been muted to avoid background noise
- Be present and engaged in the presentations
- Be prepared for active participation in Chat

# Meeting Reminders

## Agenda

- IPRO ESRD Network Program
- Quality Improvement
  - Objectives and Key Results (Goals, Education, Interventions)
  - Health Equity and Culturally and Linguistically Appropriate Services (CLAS)
- Patient Services
  - Emergency Management
  - Patient Experience of Care
- ESRD Data Management

# IPRO ESRD Network Program

Sue Caponi, MBA, BSN, RN, CPHQ, CPXP  
Vice President, ESRD Network Program

# IPRO Overview

## Capabilities

- Healthcare quality improvement-focused entity for **40 years**
- Quality Innovation Network - Quality Improvement Organization (QIN-QIO) since the first Scope of Work in **1989**
- End-Stage Renal Disease (ESRD) Network since **2006**
- External Quality Review Organization (EQRO) in **11 states**
- Independent Review Organization (IRO) in **15 states and the District of Columbia**
- Network of more than **500 board-certified physician consultants**
- **300 professional employees** including physicians, registered nurses, epidemiologists, biostatisticians, data analysts, medical record reviewers, health policy experts, programmers, systems analysts, Web technology experts and marketing/communications specialists
- Nationwide healthcare quality experts evidenced by our work in **33 U.S. states and territories**
- **URAC Accredited** IRO since 2000
- **ISO 9001:2015 certified**

# Mission Statement

The Mission of the IPRO End Stage Renal Disease (ESRD) Network Program is to promote health care for all ESRD patients that is safe, effective, efficient, patient-centered, timely, and equitable.

# Administration Team

Phone: 516-686-9790

**Susan Caponi, MBA, BSN, RN, CPHQ, CPXP**

Vice President, ESRD Program  
Executive Director, Network 1 and 2

**Danielle Daley, MBA, CPHQ, CPXP**

Executive Director, Network 6  
Patient Services Lead  
Emergency Incident Commander

**Victoria Cash, MBA, BSN, RN, CPHQ**

Executive Director, Network 9  
Quality Improvement Lead

**Laura Edwards**  
Contract Manager

# ESRD Statement of Work (SOW)

## 5-Year Contract Cycle

- Contract Cycle (Option Period): June 1, 2021 – April 30, 2026
- Option Period 3 ends April 30, 2025
- Supports achieving quality improvement (QI) goals
- Networks deploy interventions that target patients, dialysis/transplant providers, other providers, and other stakeholders
- QIAs incorporate a focus on health equity and vulnerable populations
- Large focus on facility site visits to drive improvement
- Contract modification with OY3
  - Modification began on May 1, 2024
  - Measures excluded: nursing home, depression, telemedicine, and 2728 (over one year)
  - There are 18 QI Goals in Option Year 3

# IPRO ESRD Network Program

Service Areas (June 2024)

**IPRO  
ESRD Program**

**202,694**  
Dialysis Patients

**1,950**  
Dialysis Facilities

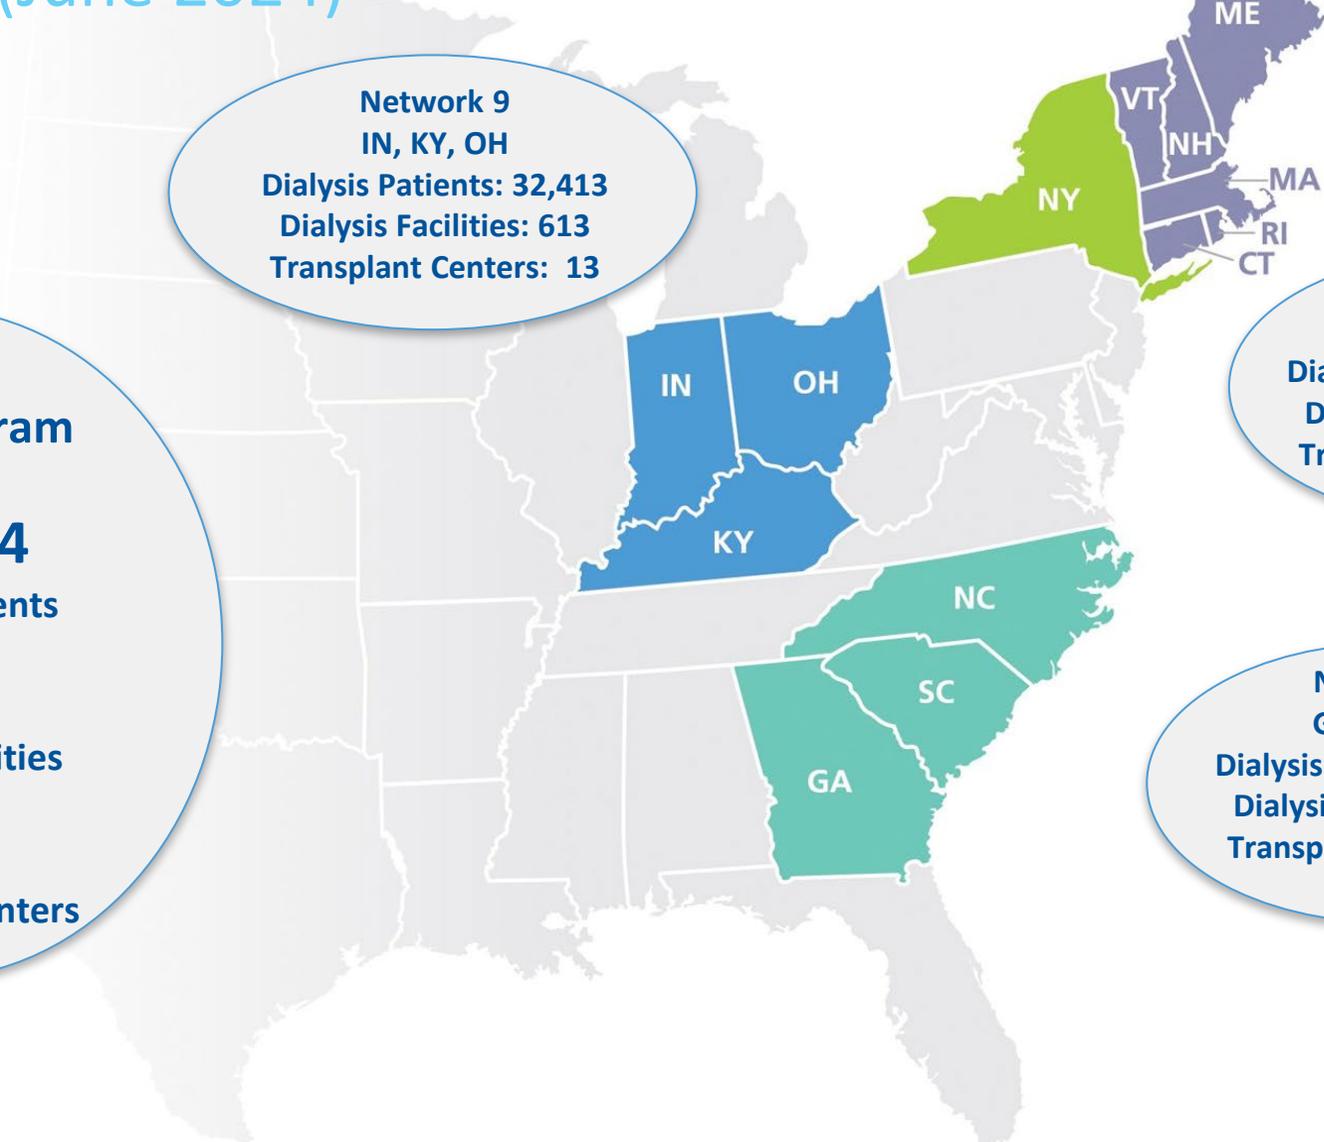

**55**  
Transplant Centers

**Network 9**  
IN, KY, OH  
Dialysis Patients: 32,413  
Dialysis Facilities: 613  
Transplant Centers: 13

**Network 1**  
CT, MA, ME, NH, RI, VT  
Dialysis Patients: 14,919  
Dialysis Facilities: 202  
Transplant Centers: 15

**Network 2**  
NY  
Dialysis Patients: 28,401  
Dialysis Facilities: 363  
Transplant Centers: 15

**Network 6**  
GA, NC, SC  
Dialysis Patients: 50,591  
Dialysis Facilities: 772  
Transplant Centers: 12

# CMS Expectations

## Network Responsibilities

- Create a collaborative environment to focus on quality improvement
- Assist CMS in understanding the needs of patients
- Provide assistance to ESRD patients and providers
- Encourage patient engagement
- Evaluate and resolve patient grievances
- Collect data to measure quality of care
- Emergency preparedness and disaster response

# CMS Expectations

## Facility Responsibilities

- Participate in Network Quality Improvement Activities (QIAs)
- Inform patients of available Network resources
  - Grievance resolution
  - Educational materials
  - Peer-to-peer mentoring
- Notify the Network of major events
  - Facility closures/altered treatment schedules
  - Staffing or supply shortages
- Respond to inquiries and requests for information
- Timely submission of data
- Keep facility personnel information updated in the IPRO ESRD Facility Information Management System
- Discuss challenges/barriers

# Annual Collaborator Survey

We Want to Hear from YOU!

- Conducted early June 2024
  - Request sent via ESRD Communications Email and IPRO Learn
- Metrics are used to gauge the effectiveness and efficiency of collaborating with our organization (IPRO), including:
  - Customer Satisfaction
  - Usefulness of Educational Materials for Quality Improvement
  - Technical Assistance/Help Desk Support
  - Staff Responsiveness
  - Patient and Family Engagement Support

# Annual Collaborator Survey

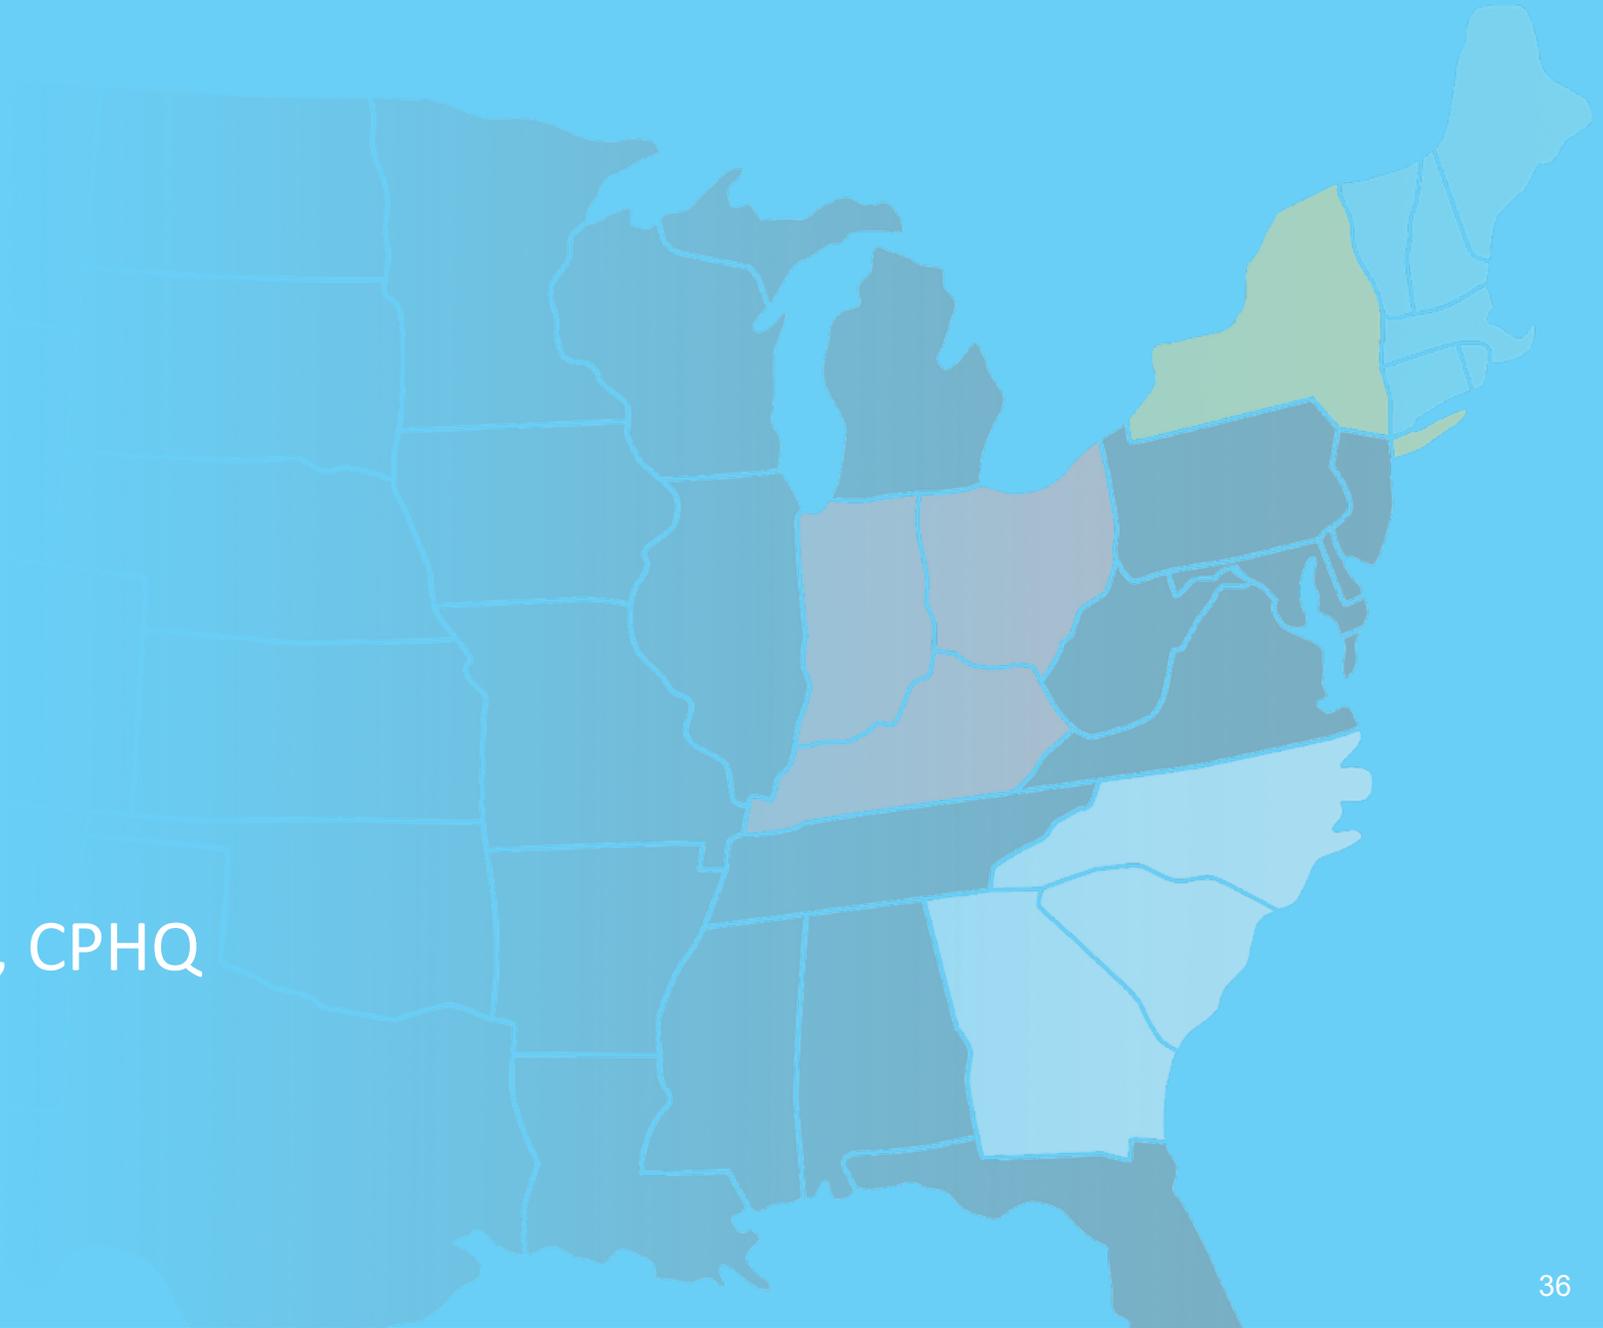

## Interventions Based on Feedback

- Launching a video of the Network's role for dialysis new staff - **Coming in July!**
- Website redesign for easier navigation - **Beginning in Fall 2024!**
- Toolkit: Empower Yourself: A Facilities Guide to Connecting and Knowing your ESRD Network - **Coming in July!**

# Quality Improvement

Victoria Cash MBA, RN, CPHQ  
Executive Director

# Quality Improvement Team

**Michele Anderson, CCHT**  
On-Site Technical Assistance

**Marie Heard, OCDT**  
Assistant Director  
On-Site Technical Assistance

**Vicki Dodds, BSN, RN**  
Assistant Director  
On-Site Technical Assistance

**Joseph Kiswii, MBChB, MPH, RN, BSN**  
Assistant Director  
On-Site Technical Assistance

**Katie Chorba, MSN, RN**  
Assistant Director; Project Lead -  
Hospitalizations, and Clinical  
Quality of Care Cases

**Caroline Sanner, MSN, RN-BC, CPHQ**  
Assistant Director  
Project Lead - Transplantation

# Quality Improvement Team

**Aisha Edmondson**  
Project Lead - Patient Family  
Engagement

**Tiffany Reese-Arrington, CCHT**  
Project Lead – Healthy Lifestyles

**Yvonne Heavner RN, RNBS**  
Project Lead - CKD and Behavioral  
Health/Depression

**Stephanie Roy, MPH**  
Health Equity Specialist

**Michelle Prager, MSW, LSW**  
Project Lead - Home Modalities and  
Telemedicine

# May 2024-April 2025 Updates and Initiatives

## Program Objectives

- Improve Care in High Cost/ Complex Chronic Conditions
  - Improve Education and Access to Empower Patient Choice of a Home Modality
  - Improve Education and Access to Empower Patient Choice of Transplant
  - Educate and Manage to Prevent Disease - Related Vaccinations
- Reduce Hospitalizations and Outpatient Emergency Room Visits
- Improve Patient and Family Engagement at the Facility Level
- Improve quality of Data entered into the End Stage Renal Disease Quality Reporting System (EQRS)
- Lead efforts to improve equity in the delivery of healthcare - CLAS

# How Do We Effect Change?

## Multifaceted Approach

### Network-Wide

1. **Daily** - 1:1 problem solving and idea sharing
2. **Weekly** - Provide technical assistance based on data outcomes
3. **Monthly** IPRO Learn interventions
4. **Quarterly** NCC LAN, CoP, and Expert Team Calls
5. **Bi-Annual** Community Coalition Cycles, MRB Calls, and Best Practice Calls
6. **Annual** Network Council Call

# IPRO Learn

Happy #PrideMonth!

The LGBTQ+ community faces many barriers when it comes to seeking healthcare due to the fear of discrimination and rejection. This puts the community at a higher risk for developing health problems like kidney disease. Listen to this podcast from National Kidney Foundation (NKF) to learn how you can help you/ your patients advocate for themselves at future healthcare appointments to make sure everyone receives the care that they deserve.

# Polling Question

Your Feedback is Needed!

Have you used any of the activities or resources from the monthly IPRO Learn activities at your facility?

# Performance Reports and Network/National Calls

To update Facility Contacts:  
<https://c1abd801.caspio.com/dp/4ebb7000068d9ae2c0504631875a>

**Home Modalities Quality Improvement Activity (QIA)**

For the Increasing Home Modality QIA, the Network assigned the Facility Goal based on your current patient census.

- INCIDENT PATIENTS are 'New ESRD' whose FIRST Modality is HOME/PD. This measure is assigned to dialysis facilities that are CMS Certified to offer Home Modalities.
- TRANSITION PATIENTS change from an in-center modality to HOME/CAPD/CCPD. The in-center facility gets 'credit' when a patient either: has a HOME/PD Treatment Added in the same facility OR is admitted to another facility as a HOME/PD patient.

**INSTRUCTIONS for This Report**

- Share this Report with your Home Nurses (if applicable)
- Look up each UPI in EQRS to make sure their Admit and Treatment Dates are correct
- If any patient is missing from this Report, fix their Admit and Treatment Information in EQRS; submit a Ticket to the Network for assistance
- REMEMBER: This Report only shows patients ADDED to a Home Modality during the period of May 1, 2023 – April 30, 2024.

**EQRS Guide: 'New ESRD' Patients Start** <https://help.esrd.ipro.org/support/solutions/articles/9000228180-new-esrd-patients-on-a-home-modality-a-home-modality-in-eqrs>

**EQRS Guide: Reporting Home Modality** <https://help.esrd.ipro.org/support/solutions/articles/9000210319-eqrs-home-modality-training-in-eqrs>

Home Patients	Measure	Facility Goal by April 30, 2024	Current Count: May 1, 2023 through 4/30/2024	Left to reach Goal by April 30, 2024
0	Incident	1	0	1 from Goal!
	Transition	7	3	4 from Goal!

UPIs of patients counted towards facility Goals are listed below/next page of this Report.

Report Created on:	CCN	Home Measure	Treatment Start Date	Patient UPI
5/13/2024	072501	Transition to Home	7/17/2023	[REDACTED]
	072501	Transition to Home	10/23/2023	[REDACTED]
	072501	Transition to Home	1/23/2024	[REDACTED]

End of Report

**CMS Home Modalities Goals 2021 - 2025**

- 30% increase in INCIDENT patients starting a home modality over Baseline.
- 12% increase in TRANSITION patients switching to a home modality over Baseline.

**IPRO ESRD Network Best Practice Series: Engaging Patients to Drive Success**

**Details**

Join us to learn how patient engagement strategies help drive towards better patient outcomes focused on peer-to-peer support, patient activation, and preventative care planning.

Our speakers will share their experiences in these key areas and how they have contributed to greater facility success in quality improvement.

This event has passed.

Facilitator: Chiao Wen Lan and Emma Okamoto  
 End Stage Renal Disease National Coordinating Center (ESRD NCC)

# How Do We Effect Change?

## Targeted Improvement Effort

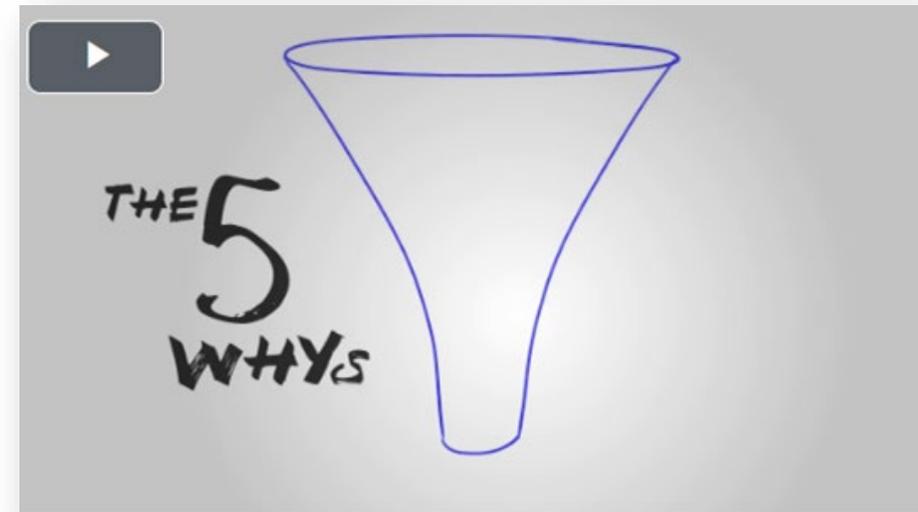

### Community Coalitions and On Site Visits

1. Focused selection of facilities based on demographics and past performance
2. 6-month engagement in a quality improvement focus area
3. Accompanied with an On Site Visit
4. Root Cause Analysis and Plan-Do-Study-Act
5. Resource dissemination and monitoring of performance with tailored feedback
6. Daily technical assistance
7. Patient integration into the QI process

# Root Cause Analysis (RCA)

## First Step in Problem Solving

- Identify your high-level problem
- Ask the 5-whys
  - Sometimes it can take <5 or >5
- Once you ask your whys, you are led to your root cause
- The root cause will be the barrier that you work on overcoming/solving throughout the project life cycle

# Plan-Do-Study-Act (PDSA)

- What is a PDSA cycle?
  - For improving a process or carrying out a change
  - Utilizes internal and external customers to determine what change is needed and generates feedback on success

# On-Site Technical Assistance

- Some facilities will have an on-site visit by the Network
- Site Visits will include:
  - Review of your data outcomes and areas of improvement
  - Quality improvement assistance
  - Resource and intervention planning to mitigate barriers
- Site visits are focused on providing help to facilities to address quality barriers and to increase a health equity focus. They are not audits

# Quality Improvement Objectives and Key Results

Katie Chorba, MSN, RN  
Assistant Director

Caroline Sanner, MSN, RN-BC, CPHQ  
Assistant Director

# Improve Care in High Cost/ Complex Chronic Conditions

## Improve Education and Access to Transplantation

### Goal

- Increase the number of patients added to the kidney transplant waitlist
- Increase the number of patient who receive a kidney transplant

# Improve Education and Access to Transplantation Interventions

## Understanding and Agreeing to Better Than Dialysis Kidneys

**Better Than Dialysis Kidneys** can be a good option for you if you are older, have other medical conditions in addition to kidney disease, or if you have been on dialysis for several years.

Considering and accepting a *Better Than Dialysis* kidney can also shorten your time on the transplant waitlist. These kidneys may also be called expanded criteria or high KDPI kidneys.

Expanded Criteria Kidneys	High Kidney Donor Profile Index (KDPI)
<p>Expanded criteria kidney donors have the following risk factors:</p> <ul style="list-style-type: none"> <li>Donor age is over 60, or over age 50 with these risk factors:                             <ul style="list-style-type: none"> <li>History of high blood pressure,</li> <li>Stroke as the cause of death,</li> <li>Serum creatinine level over 1.5 mg/dL before the kidney is removed (this shows the level of kidney damage).</li> </ul> </li> </ul> <p>Accepting one of these kidneys can improve your <b>quality of life</b> while also providing rest from dialysis.</p> <p>Your transplant center must get your <b>written permission</b> to consider one of these kidneys for you. The kidney may not be perfect but could be a great option for you. These kidneys may require some dialysis after the transplant to “kick start” the function of the kidney, but your transplant team will have a plan for that.</p>	<p>KDPI is used to provide each kidney with a score to help transplant professionals match the right kidney for you. KDPI scores are based on characteristics of the individual donating the kidney. A high KDPI kidney score may be based on a kidney donor’s:</p> <ul style="list-style-type: none"> <li>Age, height, and weight,</li> <li>Race/ethnicity,</li> <li>History of high blood pressure and diabetes,</li> <li>Cause of death,</li> <li>Serum creatinine level, and</li> <li>Presence of hepatitis C.</li> </ul> <p>All or any of these characteristics can help determine how long the kidney will function for you.</p> <p>Higher KDPI scores are expected to function for a shorter amount of time and every transplant and recipient’s experience will vary. These kidneys may be a good option if you do not want to stay on dialysis for a long time.</p>

**Ask your nephrologist or transplant team about Expanded Criteria and High KDPI kidneys - they are *Better Than Dialysis*.**

# Patient and Family Engagement

## Improve Patient and Family Engagement at the Facility Level

### Goal

- Increase the number of facilities who integrate patients and families into QAPI meetings
- Increase the number of facilities that assist patients to develop a life plan
- Increase the number of facilities that develop and support a patient-patient support program

# Patient and Family Engagement Interventions

## Help With HIPAA

HIPAA or the Health Insurance Portability and Accountability Act was passed by Congress in 1996. It requires the protection and confidential handling of protected health information

All dialysis patients have rights and responsibilities, which are reviewed with them upon initiation of treatment. One of the rights listed, and extensively reviewed, are patient's privacy rights or HIPAA.

**Why is it important to allow posting of some patient information?**  
Patient involvement is strongly encouraged to meet quality improvement goals set by CMS. One of the best ways to engage patients is to share information about patient progress in the facility.

**How can a facility prevent HIPAA violations when posting information?**  
Protecting patients against any HIPAA violations is of utmost importance. In order to ensure patients are protected, many facilities have initiated a consent process which allows information sharing with permission from patients.

**What can a facility do to make sure HIPAA requirements are being met?**

- Create an admission process to obtain written consent from patients to share their information and images, and provide details on the type of updates the facility likes to post
- Annually review forms on every patient to ensure consent is current, and have patients review and resign any necessary paperwork
- Keep lists of patients who have not signed consent for information sharing, up-to-date and easily available to all staff, so they can check before posting any patient updates

**Examples of activities where patients may have personal information disclosed about them:**

Activity	Facility Concern	How to Ensure HIPAA Compliance
Sharing a patient's transplant status with other patients using the "Newly Transplanted, Let's Celebrate" poster	Poster includes patient photo; patient will not want their transplant status disclosed; poster is displayed in public area	<ul style="list-style-type: none"> <li>✓ Before or following the transplant, ask the patient for verbal permission to display the poster and/or tell other patients about their status</li> <li>✓ Allow the patient to set boundaries on how much information they would like disclosed. Do <u>not</u> display poster if the patient declines.</li> </ul>
Inviting patients to the facility's monthly Quality Assurance and Performance Improvement (QAPI) meetings	Facilities are concerned about patients hearing staff discuss treatment and clinical information about other patients in the facility	<ul style="list-style-type: none"> <li>✓ When inviting patients to participate in QAPI, designate a portion of the meeting (either beginning or end) to have them speak about patient activities, concerns, and/or ideas</li> <li>✓ Avoid talking about other patient-specific information during this time</li> </ul>

## Guidelines for Patient Representatives Who Attend QAPI Meetings

- No personal information about any patient will be discussed.
- No identifying information that relates to or could connect to a particular patient or a staff member shall be discussed when a patient representative is present.
- Input from patient representatives is given first priority in QAPI meetings. Patients need to share their positive and negative experiences during the preceding month.
- To ensure the patient perspective is accurately heard, select patients from each shift to sit in the QAPI meeting. If this practice is not possible, a facility may have one designated patient representative who will rotate and continue to make efforts to recruit patients.
- The role of the patient representative is to voice any general comments, concerns "top of list" issues that matter most to patients on dialysis. This includes any suggestions for improvements that would result in making patients' visits to our facility more enjoyable, calm and comfortable as well as suggestions about needed patient education (e.g., insurance changes, Medicare or Medicaid rules, travel rules and requirements, etc.)
- Patient representatives should be aware of the behavior that could lead to an involuntary discharge, as well as the process, e.g., non-payment of co-payments or threats to other patients, staff members or any providers, etc.
- Patients who act as a QAPI representative should be active members of the quality improvement team at the facility working with facility leadership on quality activities. They should also be active patient leaders assisting new patients and existing patients to better understand and advocate for their care.
- If patients are unable to attend the meeting, they can also provide a written report to provide their updates to ensure their voice is heard.

## IPRO End-Stage Renal Disease Network Program

### Patient Facility Representative Alliance

Working together for better health.

**We need you**

End-Stage Renal Disease Network Program  
esrd.ipro.org

## Including Patients in Your Facility QAPI Meetings: Format and Guide

Created by Jane Adams, MSW, RN, Social Worker at SUNY Downstate Peritoneal Dialysis Center and adapted for the IPRO End-Stage Renal Disease Network Program.

- Patient Selection**
  - Select patients from different treatment schedules and shifts, if available.
  - Talk to each patient about their preferred way of participating (in person, virtual, teleconference, chatroom, written report out).
- Creating "Way" Process**
  - Develop guidelines specific to your facility's policies, procedures, and culture.
  - Take time to help the patients feel comfortable about contributing to QAPI meetings.
- Scheduling the Patient**
  - Schedule times during the meeting for each of the patients to present their report.
  - Make sure patients understand that the scheduled time is dedicated to their presentation and that they are to focus only on their own issues.
  - Be sure that patients don't share PII or PHI of other patients.
- After the Patient Present**
  - Thank patients for their contributions to the meeting.
  - Make sure they know that a follow up to their report will be provided after the meeting.
  - Be sure that patients don't share PII or PHI of other patients.
- Follow-Up**
  - Identify issues discussed during the meeting which require follow-up.
  - Create a timeline with due date for actions leading to resolution.
  - Ensure that a designated member of the QAPI team includes the patient in the follow-up process.

# Health Equity and Culturally and Linguistically Available Services (CLAS)

## Goal

- Deploy health equity interventions to the entire population
- Improve communications in areas with low health literacy
- Work with dialysis organization to implement National CLAS standards
  - CLAS are services that are respectful of and responsive to each person's cultural and communication needs
- Assess facility's commitment to health equity using five attestation domains

# Health Equity and Culturally and Linguistically Available Services (CLAS)

## Interventions

**Module 1**  
What is CLAS?

Stephanie Roy, MPH  
Health Equity Specialist

This material was prepared by the IPRO ESRD Network Program, comprising the ESRD Networks of New York, New England, the South Atlantic and the Ohio River Valley, under contract with the Centers for Medicare & Medicaid Services (CMS), an agency of the U.S. Department of Health and Human Services. ### My Fast Food Plate

**What should I be looking for?**

**Main Meal** Try to look for options that are grilled or baked, like a grilled chicken sandwich or a salad with lean protein. Try to avoid fried items because they tend to be highly processed and could contain more phosphorus.

**Sides** If available, try to order sides like steamed vegetables, plain baked potatoes, or a salad. If you order onion rings, ask for no added salt. Avoid items that have cheese, bacon, or creamy sauces. These items may be high in sodium and phosphorus.

**Drinks\*** Water is your best choice for a drink. If you would like something different, try to find drinks that are low in phosphorus or phosphorus free.  
\* Always remember to watch your fluid intake. One of the biggest challenges with being on dialysis is fluid overload.

Remember, customization is key! Don't hesitate to make changes to your order. You can ask for sauces and dressings on the side, ask for no added salt, or remove any items that do not fit into your diet. Most fast food restaurants are willing to accommodate their customers.

For more information or to file a grievance, please contact us:

Eating healthy at fast food restaurants while on dialysis is not only possible but could be a positive experience with the right tools. This guide will help you learn how to identify kidney-friendly food options, understand recommended portion sizes, and make informed decisions that align with your dietary restrictions.

Understanding how to read a fast food menu can be a little tricky while following a renal-friendly diet. Here's a guide for when you are grabbing something fast on the go:

**Watch out for sodium levels:** Avoid foods with salt as the first ingredient.

**Be aware of phosphorus and potassium:** When reading nutritional information, phosphorus can disguise itself under different names. Look for ingredients that start with PHOS like phosphoric acid or sodium triphosphate.

**Foods Low in Phosphorus:**

- Fresh fruits and vegetables
- Lightly colored sodas
- Homemade iced tea
- Almond milk

**Foods Low in Potassium:**

- Applesauce
- Cabbage
- Cooked rice
- Cranberry or grape juice

**Identify smart protein selections:** Some examples of smart protein selections are:

- Chicken without the skin
- Lean cuts of meat
- Fish

**Main meal:**

- Plain hamburger
- Grilled chicken sandwich
- Salad with grilled chicken
- Soft taco, no beans or tomatoes
- Slice of thin crust cheese pizza
- Fish sandwich, no tartar or cheese
- Tuna salad sandwich

**Fast Food Hack!**

Order a kid's meal for smaller portions

Main meal: plain hamburger  
Side: apple slices  
Drink: lemon lime soda

**Drinks (small):**

- Water
- Apple juice
- Lemon Lime Soda
- Coffee

**Disclaimer:** it is vital for registered diabetics to help guide patients to better options.

USDA uses the recipe provided by the restaurant to calculate the micro nutrients; unfortunately, this does not contain preservatives or additives added to the food, meaning that the phosphorus content provided could be less than half of the actual phosphorus consumed for each item.

**Sides:**

- Salad
- Small onion rings, no salt
- Small French fries, no salt
- Applesauce

# 2728 Form and 2746 Form Timeliness Compliance

## Submitting CMS-Required Forms in EQRS

- **2728 Forms: Due within 45 Days of ‘New ESRD’ Admission**
  - Patient’s Medicare eligibility Form, confirms ESRD vs CKD
  - Patient and Physician signature **dates** required
- **2746 Forms: Due within 14 Days of ‘Date of Death’ in EQRS**
  - **No signature needed**
  - Select **Unknown** if Cause of Death is not known

**\*\* New 2728 Form  
not ready to use  
until October 2024 \*\***

$$\text{Compliance Rate} = \frac{\text{\# of Forms Submitted On Time}}{\text{Total \# of Forms Submitted}}$$

# Improve Care in High Cost/ Complex Chronic Conditions

## Improve Education and Access to Home Modalities

### Goal

- Increase the number of incident patients starting on a home modality
- Increase the number of prevalent patient transitioning to home modality

# CMS Modifications To Home Projects

## Incident Goal Changes

- Achieve a 15% increase in the Natal number of incident ESRD patients using a home modality (previous goal was 45%)
- Data for this goal will get re-baselined for this performance year
- An incident patient will now be defined as starting a home modality within their first 90 days of starting dialysis

# CMS Modifications To Home Projects

## Prevalent Goal Changes

- Achieve an 8% increase in the Natal number of prevalent patients using a home modality (previous goal was 20%)
- Data for this goal will get re-baselined for this performance year
- Prevalent patients will be defined as patients beyond the 90 days following their first dialysis start date

# Improve Care in High Cost/ Complex Chronic Conditions

## Healthy Living - A Preventative Health Approach

### Goal

- Increase 25% of dialysis patients fully vaccinated for COVID-19, from the baseline, including boosters\* (**previous goal was 80%**)
- Increase 15% of dialysis facility staff fully vaccinated for COVID-19, from the baseline, including boosters\* (**previous goal was 95%**)
- Ensure 80% of ESRD patients receive the annual flu vaccination (**previous goal was 90%**)
- Ensure 15% of ESRD staff receive the annual flu vaccination from the baseline (**previous goal was 90%**)
- Increase 10% of ESRD patients who are fully vaccinated for pneumococcal pneumonia from the baseline (**previous goal was 7%**)

\*As determined by the CDC or CMS

# Healthy Living Interventions

End-Stage Renal Disease Network Program

**Protect yourself. Get the Vaccines You Need!**

Vaccination is a safe, effective way to protect yourself from serious illness.

**Vaccines recommended for dialysis patients:**  
 Annual Flu Vaccine • Pneumonia Vaccine • Hepatitis Vaccine • COVID-19 Vaccine

Annual Influenza (Flu) Vaccine	Pneumonia Vaccine	Hepatitis Vaccine
<ul style="list-style-type: none"> <li>Influenza, also called the flu, is a contagious and serious respiratory disease.</li> <li>As a dialysis patient, if you get the flu you are more likely than others to develop serious problems.</li> <li>Each year there are different types of flu vaccines available; some are better suited for kidney patients. Ask your healthcare team about which flu vaccine is best for you.</li> <li>Receiving an annual flu vaccine will help protect you from getting the flu.</li> <li>According to the Centers for Disease Control and Prevention (CDC), influenza season usually is at its worst in February and can last until late May. The best time to receive a vaccine is October or November.</li> </ul>	<ul style="list-style-type: none"> <li>Pneumonia, an infection of the lungs, needlessly affects millions of people worldwide each year.</li> <li>Pneumonia is caused by bacteria and can lead to serious infections.</li> <li>Pneumonia infections can often be prevented and can usually be treated.</li> <li>The pneumonia vaccine protects your body from many types of harmful bacteria.</li> <li>You should receive a pneumonia vaccine every five years.</li> <li>You can receive this vaccine any time of year.</li> </ul>	<ul style="list-style-type: none"> <li>Hepatitis B causes the liver to become inflamed, and limits its normal functions. It is a serious infection that can be very dangerous and even life-threatening.</li> <li>Hepatitis B is spread through contact with blood or body fluids from someone who has the virus.</li> <li>Dialysis patients are at greater risk for exposure to this virus because of repeated access to the bloodstream during treatment.</li> <li>The hepatitis B vaccine is your best protection against the virus. It also protects against a form of liver cancer caused by hepatitis B.</li> <li>The hepatitis B vaccine is usually given in a series of three to four injections or doses over a six-month period.</li> </ul>

# Reduce Hospitalizations and Outpatient ED Visits

Inpatient Hospitalizations, 30-Day Readmissions, and ED Visits

## Goal

- Decrease in the rate of hospital admissions\*
- Decrease in the rate of hospital 30-day, unplanned readmissions\*
- Decrease in rate of emergency department visits\*
  - Data is based on Medicare claims data

\*Caused by a primary diagnosis category, defined by CMS

# Reduce Hospitalizations and Outpatient ED Visits Interventions

## WHAT TYPE OF CARE DO I NEED?

Sometimes you need to make a quick decision about where you should go to seek medical attention.

Here's a guide to help you get the care you need when you need it!

If you need assistance contact your dialysis unit during operation hours. When in doubt, dial 911.

Condition, Signs, Symptoms	Primary Care Doctor	Urgent Care Facility	Hospital Emergency Department
Abscess that needs to be drained (painful sore with pus)			✦
Allergic reaction (sudden swelling of face or neck, having trouble breathing)			✦
Allergies (seasonal)	✦	✦	
Asthma attack		✦	
Bleeding that will not stop			✦
Shortness of breath			✦
Broken bone		✦	
Broken bone (bone sticking out of the skin)			✦
Burn (minor)	✦	✦	
Burn (white or charred – severe)			✦
Cast problem (wet or soiled)			✦
Chest pain			✦
Cold	✦	✦	
Cough	✦	✦	
Cut (skin surface – minor)		✦	
Cut (deep cut, needing stitches – severe)			✦
Dehydration (weak, dizzy, fever, headache, unable to keep fluids or foods down)			✦
Diarrhea	✦	✦	
Dizziness (falling, unable to stand)		✦	✦
Dog bite		✦	✦
Earache	✦	✦

**GET AHEAD of SEPSIS**

FOR PATIENTS AND FAMILIES

KNOW THE RISKS. SPOT THE SIGNS. ACT FAST.

**PROTECT YOURSELF AND YOUR FAMILY FROM SEPSIS.**

**WHAT IS SEPSIS?**  
 Sepsis is the body's extreme response to an infection. It is a life-threatening medical emergency. Sepsis happens when an infection you already have triggers a chain reaction throughout your body. Infections that lead to sepsis most often start in the lung, urinary tract, skin, or gastrointestinal tract. Without timely treatment, sepsis can rapidly lead to tissue damage, organ failure, and death.

**IS SEPSIS CONTAGIOUS?**  
 You can't spread sepsis to other people. However, an infection can lead to sepsis, and you can spread some infections to other people.

**WHAT CAUSES SEPSIS?**  
 Infections can lead to sepsis. People at higher risk for sepsis include those who get into a person's body, they can cause an infection. If you don't stop the infection, it can cause sepsis. Bacterial infections cause most cases of sepsis. Sepsis can also be a result of other infections, including viral infections, such as COVID-19 or shingles.

**WHO IS AT RISK?**  
 Some people are at higher risk for sepsis.

- All **17 million** adults in America develop sepsis.
- Nearly **270,000** Americans die as a result of sepsis.
- In **2** patients who die in a hospital, **87%** of cases, sepsis, or the infection causing sepsis, starts outside of the hospital.

**65+** Adults 65 or older  
**People with weakened immune systems**  
**People with chronic health conditions, such as diabetes, kidney disease, or a history of cancer**  
**People who have had surgery**  
**Sepsis survivors**  
**Children over age 65**

**GET AHEAD of SEPSIS**

FOR PATIENTS AND FAMILIES

KNOW THE RISKS. SPOT THE SIGNS. ACT FAST.

**HOW CAN I GET AHEAD OF SEPSIS?**

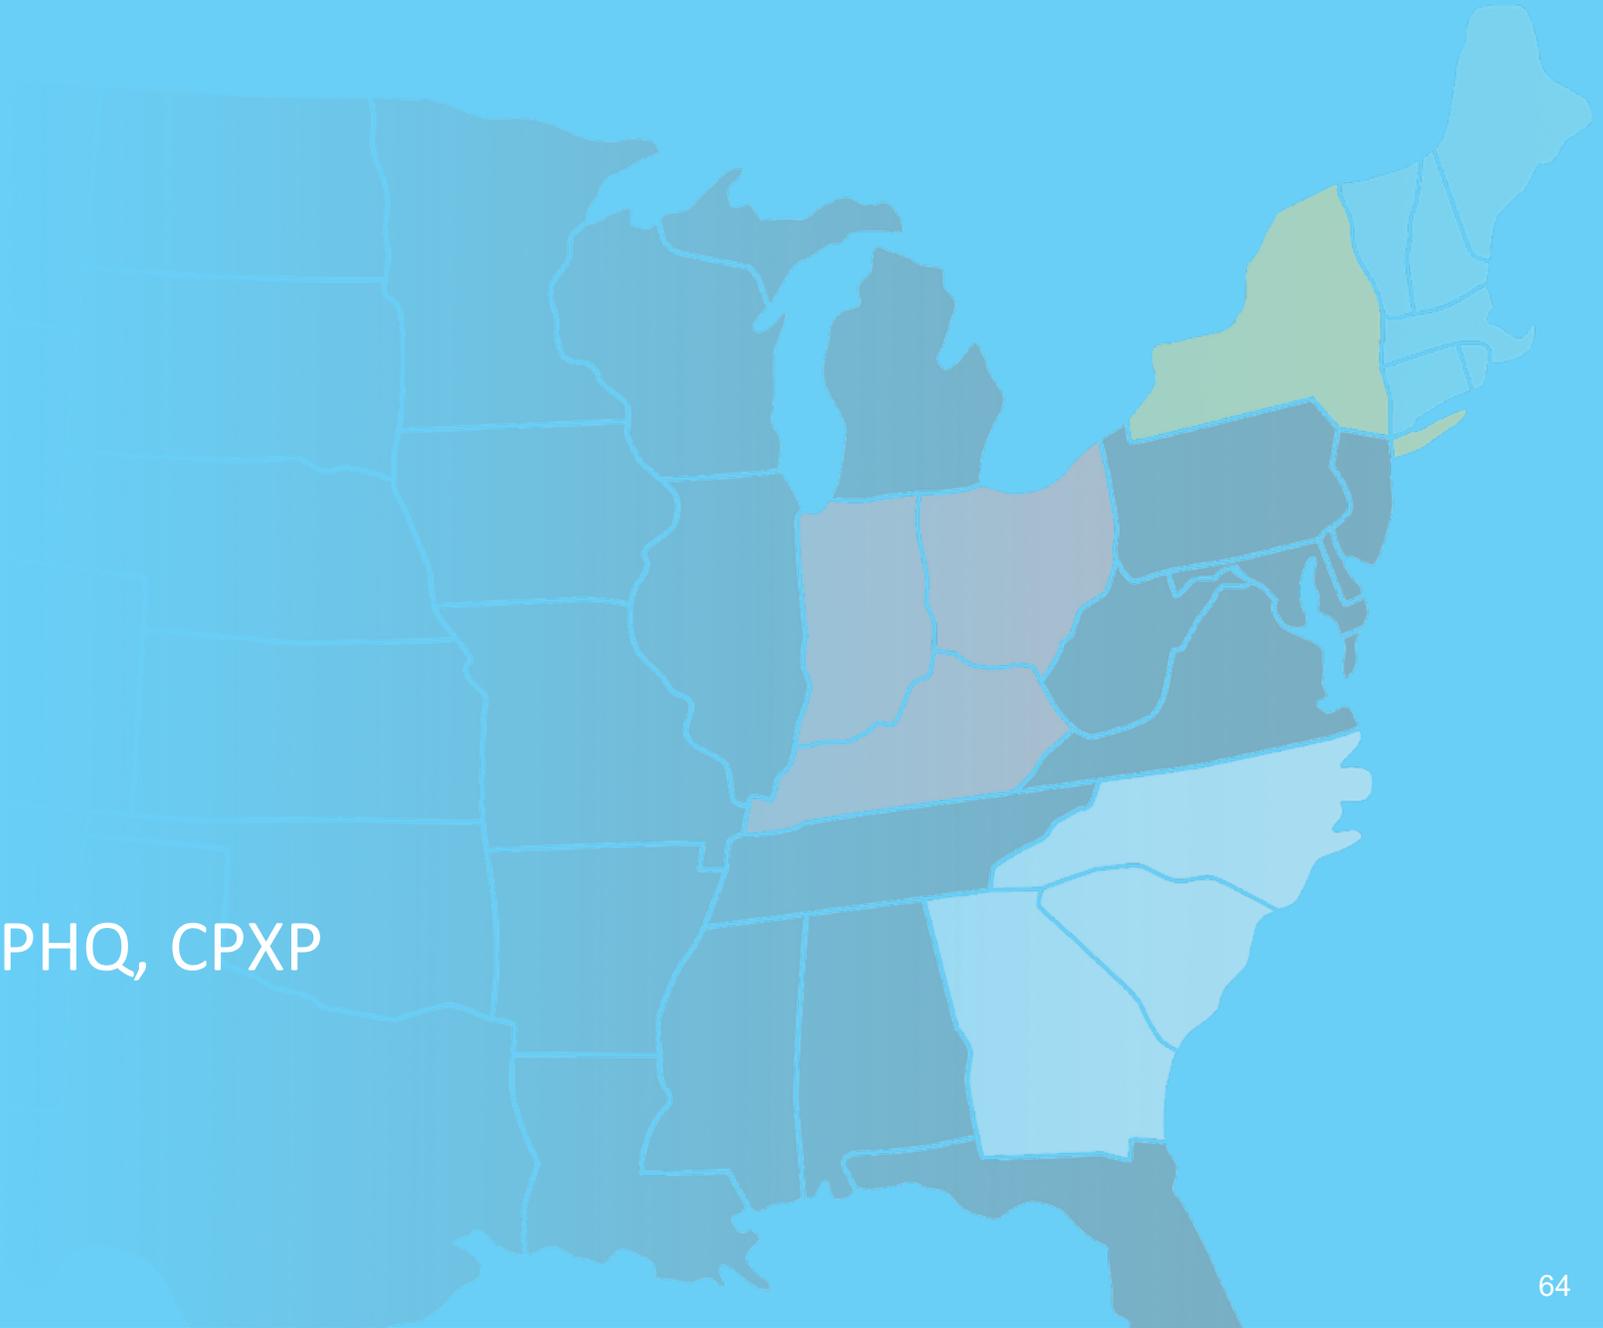

As a patient, you can take specific steps to reduce your risk of sepsis, including COVID-19, such as:

- 1 PREVENT INFECTIONS**  
 Link to your healthcare professional about things you can do to prevent conditions that can lead to sepsis.
  - The good care of chronic conditions
  - Get recommended vaccines
- 2 PRACTICE GOOD HYGIENE**  
 Remember to wash your hands and keep cuts clean and covered until healed.
  - Wash your hands
  - Keep cuts clean and covered until healed
- 3 KNOW THE SIGNS AND SYMPTOMS**  
 A patient with sepsis might have one or more of the following signs or symptoms. A medical assessment by a healthcare professional is needed to confirm sepsis.
  - High fever or low temperature
  - Rapid or irregular heart rate
  - Confusion or altered mental status
  - Shortness of breath
  - Extreme pain
  - Extreme weakness
  - Clonus or muscle rigidity
  - Changes in urine color
- 4 ACT FAST**  
 If you or your loved one has an infection that's not getting better or is getting worse, ACT FAST. Get medical care IMMEDIATELY. Before you go, call a nurse, a health care provider, or your healthcare professional. "Good" this infection is leading to sepsis" and if you need to go to an emergency room for medical assistance.
  - Sepsis is a medical emergency. ACT FAST.

To learn more about sepsis and how to prevent infections, visit [www.cdc.gov/sepsis](http://www.cdc.gov/sepsis) or call 1-800-CDC-INFO.

# Emergency Preparedness, Mitigation, and Response

## Network Responsibilities

- Networks are the foundation of ESRD Emergency Management in collaboration with the Kidney Community Emergency Response (KCER) national response coordination contractor
- Networks monitor conditions that impact a facility's ability to provide service to dialysis patients
- Networks establish relationships with state emergency management officials and healthcare coalitions
- During an emergency, Networks:
  - Work to identify challenges and barriers impacting patients and facilities
  - Collaborate with emergency response stakeholders at the local level to re-establish interrupted services

# What is an Emergency?

Emergencies can be Local, State Level, Regional or National

- Facility Closed/Altered (Water, Power, Structural)
- Public Health Issues (COVID-19)
- Weather Event (Local, State or Regional)
- Man Made Event (Terrorism, Saline Shortage)
- Transportation Event (Bridge Collapse, Company Closure)
- Communications Event (Phone/Internet Outage)

*“A serious, unexpected, and often dangerous situation requiring immediate action”*

# The ESRD Emergency Hub Mobile App

## Alerts in Real Time

- A FREE collection of resources and tools created by kidney care and emergency management experts.
- The information you need to stay safe and healthy during any emergency.
- Always at your fingertips on your smartphone or tablet.
- Easily create, store, and find your treatment information, emergency resources, and needed phone numbers.
- In an emergency, receive critical information in real time, based on your location, and from trusted sources.

# The ESRD Emergency Hub Mobile App

## Application Features

- Emergency notifications
- Emergency and healthcare support organization's contact information
- My Vital Dialysis Information, prescriptions, and checklist
- Go bag supply checklist
- 3-Day emergency diet plan and shopping list
- Evacuation information page
- Medical needs shelter information page
- Severe weather information page

Apple Store

Google Play

# The ESRD Emergency Hub Mobile App

## Staff and Patient Education

- Display flyers on educational boards or high traffic areas of facility
- Provide staff education on why the app is important to promote to patients
- Discuss with staff and patient the information needed to complete the My Vital Dialysis Information
- 3-minute video provides overview of the mobile app
  - Available on YouTube: [https://www.youtube.com/watch?v=hyA\\_KPaSN8I](https://www.youtube.com/watch?v=hyA_KPaSN8I)
  - Stream video on TV in lobby or chairside

Concerned about how your dialysis and kidney transplant patients will stay safe and healthy during the next emergency?

# Patient Experience of Care

Agata Roszkowski, LMSW  
Patient Services Manager

# National Initiatives

## Improve the Patient Experience of Care

- Educate patients and dialysis facility staff about the role of the Network in resolving grievance and access to care issues
- Provide a focused audit of all grievance and access to care cases
- The Network's case review responsibilities include investigating and resolving grievances filed with the Network and addressing non-grievance access to care cases.

# Patient Experience of Care

## Network Role

The Network may assume one or more of the following roles in addressing a grievance filed by an ESRD patient, an individual representing an ESRD patient, or another party:

- **Facilitator:** Mediate concerns raised by patients and facilities.
- **Expert Investigator:** Investigate concerns raised by patients
- **Educator:** Provide patients and facilities with tools and resources to improve the patient experience of care.
- **Advocate** for the access to care of all ESRD patients
- **Referral Source:** Provide patients and facilities on all sources to report concerns.
- **Quality Improvement Specialist:** Support the improvement of facility processes to improve the overall quality of care for all patients

# Grievances

## Network Role

Upon the receipt of a grievance, the Network will classify the case as one of the following:

- **Immediate Advocacy:** Concerns that are non-clinical in nature and do not require a complex investigation; resolved in 10 calendar days or less
- **General Grievance:** Concerns that are non-clinical in nature but require complex investigation and review of records; resolved in 60 days or less
- **Clinical Quality of Care:** Concerns that involve clinical or patient safety issues and requires a clinical review of records by an RN and/or the Medical Review Board (MRB); resolved in 60 days or less

# Access to Care

## Network Role

Dialysis patients having permanent and stable access to their dialysis treatments with continuity of care from an interdisciplinary healthcare team.

### **Why is it important to preserve it?**

- Dialysis is life-saving treatment for the ESRD community
- Without an outpatient facility, patients are forced to dialyze emergently at the hospital removing regular continuity of care
- Mortality rates are increased for patients without access to regular dialysis
- Patients who go to the hospital expecting immediate treatment or better care not knowing they will not receive dialysis unless their labs show elevated lab values

# Access to Care

## Network Role

Upon the receipt of a grievance, the Network will classify the case as one of the following:

- **At Risk Involuntary Discharge:** Concerns related to possible patient discharge
- **Involuntary Discharge:** Immediate or 30 day IVD; volume monitored by the Network
  - Patient is informed in writing their treatment will be terminated from their current facility
- Two types of IVD cases:
  - 30-Day Termination
  - Immediate Termination

# Access to Care

Before considering an involuntary discharge (IVD), a facility's interdisciplinary team (IDT) should:

- Conduct a thorough assessment of the situation
- Develop a plan to address any problems or barriers the patient may be experiencing
- Note: Discharging a patient for “non-compliance” is not an acceptable reason for discharge per the Centers for Medicare and Medicaid Services (CMS) Conditions for Coverage (CfC)
- Notify the Network PRIOR to discharge any potential IVD and notice provided to patient
- Assist the patient with placement

## CMS – Conditions for Coverage for End Stage Renal Disease (ESRD) Facilities

### Interpretive Guidance: V766 & V767

Tag Number	Regulation	Interpretive Guidance
V766	<p>(f) <i>Standard: Involuntary discharge and transfer policies and procedures.</i> The governing body must ensure that all staff follow the facility's patient discharge and transfer policies and procedures.</p> <p>The medical director ensures that no patient is discharged or transferred from the facility unless –</p> <p>(1) The patient or payer no longer reimburses the facility for the ordered services;</p> <p>(2) The facility ceases to operate;</p> <p>(3) The transfer is necessary for the patient's welfare because the facility can no longer meet the patient's documented medical needs; or</p>	<p>Involuntary discharge or transfer should be rare and preceded by demonstrated effort on the part of the interdisciplinary team to address the problem in a mutually beneficial way. The facility must have and follow written policies and procedures for involuntary discharge and transfer.</p> <p>If any patients have been involuntarily discharged or transferred since the latter of either the effective date of these rules (October 14, 2008) or the facility's last survey, surveyors will review those patients' medical records to ensure compliance with these regulations and facility policy. See also requirements under Conditions for Patients' rights at V468 and V469.</p> <p>The medical director must be informed of and approve any involuntary discharge or transfer of a patient. A facility may involuntarily discharge or transfer a patient only for those reasons listed here and at V767. The medical director must ensure that the reasons for any involuntary discharge or transfer are consistent with this requirement.</p> <p>If a facility involuntarily discharges or transfers a patient for nonpayment of fees, there must be evidence in the patient's medical record that the facility staff (e.g., billing personnel, financial counselor, social worker) made good faith efforts to help the patient resolve nonpayment issues.</p> <p>In the event a facility ceases to operate, the governing body must notify CMS, the State survey agency, and the applicable ESRD Network. The facility's interdisciplinary team must assist patients to obtain dialysis in other facilities.</p> <p>If the discharge or transfer is necessary for the patient's welfare, the patient's medical record must include documentation of the medical need and reasons why the facility can no longer meet that need.</p>
V767	<p>(4) The facility has reassessed the patient and determined that the patient's behavior is disruptive and abusive to the extent that the delivery</p>	<p>Patients should not be discharged for failure to comply with facility policy unless the violation adversely affects clinic operations (e.g., violating facility rules for eating during dialysis should not warrant involuntary discharge).</p>

# Involuntary Transfer (IVT)

## Network Role

Patient is given written notice they will be transferred to an alternate facility.

### Reasons for the IVT

- Patient's nephrologist no longer will provide care and acquires an alternate nephrologist who rounds at a different facility
- Patient's facility is no longer in-network with their insurance
- The facility can no longer meet the patient's medical need
- Improper coding in EQRS

# Preventing Discharges

## How We All Win

- Patients will feel respected and will share openly due to mutual trust
- The entire team will have a shared responsibility for a positive patient experience of care
- Discharges can be decreased and/or prevented allowing the patient to have continuity of care more of a chance of success

# Preventing the Involuntary Discharge of Dialysis Patients

## Facility Guide and Checklist

- Check your organization's process for specific guidance
- It is to be used as an example or guide for work that should be documented prior to consideration of an IVD
- Necessary documents may be adjusted to meet the specific needs of the facility, patient, and reason for discharge

[https://esrd.ipro.org/wp-content/uploads/2020/07/NW6-Dialysis-Facility-Involuntary-Discharge-Guidelines\\_2019.pdf](https://esrd.ipro.org/wp-content/uploads/2020/07/NW6-Dialysis-Facility-Involuntary-Discharge-Guidelines_2019.pdf)

### Dialysis Facility Involuntary Discharge Guidelines

**STOP**

Before considering an involuntary discharge (IVD), a facility's interdisciplinary team (IDT) should:

1. Conduct a thorough assessment of the situation
2. Develop a plan to address any problems or barriers the patient may be experiencing

**Note:** Discharging a patient for "non-compliance" is not an acceptable reason for discharge per the Centers for Medicare & Medicaid Services (CMS) Conditions for Coverage (CfC).

IVD Guidelines	
<b>Notify the Network of any potential IVD</b>	Immediately notifying the Network provides an opportunity for the Network to review the issues and interventions with facility staff and see if there are other options that could be explored.
<b>Have a policy and procedure in place for IVDs</b>	<p>It is the medical director's responsibility to ensure "that no patient is discharged or transferred from the facility unless:</p> <ul style="list-style-type: none"> <li>• The patient or payer no longer reimburses the facility for the ordered services</li> <li>• The facility ceases to operate</li> <li>• The transfer is necessary for the patient's welfare because the facility can no longer meet the patient's documented medical needs</li> <li>• The facility has reassessed the patient and determined the patient's behavior is disruptive and abusive to the extent in which the delivery of care to the patient, or the ability of the facility to operate effectively is seriously impaired..."</li> </ul>
<b>Train facility staff</b>	<p>All staff should receive training in conflict management techniques.</p> <ul style="list-style-type: none"> <li>• Training must be documented</li> </ul> <p>The Facility should establish IVD and transfer policies and procedures as outlined in 494.190 Condition Governance (Page 20484). A link to the full document is located on the ESRD website along with additional resources to assist you facility: <a href="https://network6.esrd.ipro.org/home/provider/patient-services/">https://network6.esrd.ipro.org/home/provider/patient-services/</a></p>
<b>Document everything</b>	<p>It is essential that staff document and address any and all problematic behaviors, no matter how insignificant they may seem. Include documentation of all:</p> <ul style="list-style-type: none"> <li>• Related assessments/plans of care, meetings, and interventions</li> <li>• Behavioral agreements that the staff and patients work on together (<i>all behavioral agreements should be mutual between the patient and facility and should be reassessed at specified time intervals</i>)</li> </ul>
<b>IVD should be the option of last resort</b>	<p>An involuntary discharge can begin only if:</p> <ol style="list-style-type: none"> <li>1. All efforts to resolve the problem have failed.</li> <li>2. The issues and interventions to address them have been properly documented.</li> </ol>
<b>Assist the patient with placement</b>	<ul style="list-style-type: none"> <li>• The facility should assist the patient with establishing with a new physician and/or transferring to another facility if the IVD cannot be averted.</li> <li>• When attempting to assist the patient in transferring to another facility, be sure to only send the medical information requested by the other facility</li> </ul> <p><b>DO NOT</b> include additional documentation indicating that the patient is being involuntarily discharged or the circumstances surrounding the discharge unless it is specifically requested for transfer consideration. This is considered blacklisting and will be reported to the State Survey Agency.</p>
<b>Immediate IVD</b>	<p>In cases of immediate severe threat to the health and safety of others, the facility may use an abbreviated IVD procedure. Per the CfC Interpretive Guidance, "An immediate severe threat" is considered to be a threat or physical harm. For example, if a patient has a gun or a knife or is making credible threats of physical harm, this would be considered an "immediate severe threat." An angry verbal outburst or verbal abuse is not considered to be an immediate severe threat."</p>
<b>Notifying the State Survey Agency</b>	<p>Facilities must notify the State Survey Agency of all IVDs and transfers. <b>If the discharge or transfer is the result of immediate, severe threats, the State Survey Agency must be notified immediately.</b></p>

# Patient Education and Support

- As required by the conditions for coverage, all patients must be educated on the grievance process and the various options when filing a grievance
- Provide ongoing individualized education as well as displaying the Network "Speak Up!" poster in a common area that patients and visitors have access to (such as the unit lobby)

The treatment you receive should meet your need for safety, your rights as a patient, clinical standards of care, and be provided by staff who treat you fairly and respectfully.  
If you feel your treatment does not meet these standards...

**Speak Up.**  
Here's how...

**First...**  
Ask a staff member for a copy of your facility's grievance policy to find out how you can file a grievance.

**However...**  
If you are still unsatisfied or do not feel comfortable filing a grievance with your facility...

— Contact —

esrd.ipro.org

## Kidney Chronicles

IPRO END-STAGE RENAL DISEASE NETWORK PROGRAM

**What is a Grievance?**

A grievance is any concern or issue you may have about the care you receive from your dialysis facility. Patients, family members, loved ones, dialysis staff members, or anyone else who has concerns about a facility may submit a grievance.

**YOU have Options!**  
As a dialysis patient, if you are not satisfied with the care you receive there are several ways that you can share your concerns:

1. Attend a patient care plan meeting
2. Speak to members of your care team
3. File a complaint with your facility
4. Contact the State Department of Health
5. Contact your IPRO ESRD Network (see page 2 for info)

**HELPFUL TIPS TO EMPOWER ESRD PATIENTS AS CONSUMERS**

**How the Network Serves You**

- Advocates for you;
- Answers your questions about treatment, modality choices or other issues;
- Develops and provides educational materials for you and your family;
- Works with renal professionals to improve the care given to you;
- Helps keep you informed and updated to support placement and transition; and
- Provides information on grievances, appeals, and emergency, don't reach facility, contact us.

### Filing a Grievance with your ESRD Network

Your Network can work with you and your facility to help resolve your concerns. Before filing a grievance with us we encourage you to discuss your concern directly with a staff member at your facility. Ask to speak with someone with whom you feel comfortable sharing your concerns. If you do not wish to identify yourself, ask about how an anonymous grievance can be filed.

If you do not feel comfortable filing a grievance with your facility or you feel dissatisfied with the response of facility staff to your concerns, you have the right to file a grievance with your Network and with your state agency. Your state agency's contact information should be posted in the lobby of your facility; it is also provided on the back of this brochure.

#### How can I file a grievance?

- You can file a grievance in one of three ways. You can
1. Call the Network using the toll-free line,
  2. Mail us a letter, or
  3. Fax us the information.

The Network's contact information for all three options is available on the cover of this brochure.

To best help you, the Network may request information from you, such as your name, phone number, address and your date of birth. We will also ask for details (name and address) about the facility you have concerns about. If you do not feel comfortable giving us these details or sharing them with the facility, you have the right to file a grievance confidentially or anonymously.

If you file a confidential grievance, the Network will collect these details; however, we will NOT share them with the facility. If you file an anonymous grievance, we will not collect these details at all during your case. If you decide to file a case anonymously and your concern relates directly to your personal care, the Network may be limited in the actions we can take during your investigation. We will respect your choice and protect your anonymity to the best of our ability.

#### What should I expect during the grievance process?

A member of the Network's Patient Services Department will listen to your concerns and help you to best organize your thoughts; they will also provide feedback to you and maybe offer another point of view.

We may request to review documentation from your facility. This documentation may include treatment logs, social worker notes or policies and procedures of your facility.

We can provide recommendations to staff and patients/ family members to build a more positive patient-provider relationship and encourage patients and staff to participate in care conferences to address issues at the facility level.

We can provide you educational materials on kidney disease or contact information for other kidney-related organizations.

When necessary, the Network may work with your state agency for further investigation or refer your case to other governing boards or government agencies for assistance.

The Network will work to resolve your case as quickly as possible. While some cases can be resolved within 7 business days other may remain open up to 60 days.

The Network will keep in contact with you throughout the process via phone and in writing.

# Decreasing Patient-Provider Conflict (DPC) Toolkit

- Revised in December 2022
  - Health Equity
  - Self Awareness
  - De-escalation Techniques
  - Suggested safety measures
